

SUCCULENTS- SEMPERVIVUM

A very attractive perennial plant with rosettes of smooth, green leaves with occasional deep burgundy tinges on the tips. Foliage may be glossy or matt, covered in a waxy bloom or downy hairs. Ideal for decorative pots and containers, rockeries and waterwise gardens.

Care: Prefers well drained, shallow, gritty soil. Plant or keep in a sunny, open position. Fertilize with a good liquid fertilizer 2-3 times per year. Tolerant of light frost and dry periods.

Water quality is also important. Do not use water from washing machines. Ensure plants have adequate water in Spring and Summer but note that they can survive for long periods without being watered and still give a wonderful show of flowers.
